Recommended Tools

Safety Tools
- Safety Glasses
- Electrical Tape

Installation Tools
- 10mm Wrench
- Phillips Screw Driver
- Pliers
- Side Cutters
- Torque Wrench 48” lbs.

Special Chemicals
- 3M Silicon Sealant

Mandatory
Legend

STOP: Damage to the vehicle may occur. Do not proceed until process has been complied with.

OPERATOR SAFETY: Use caution to avoid risk of injury

CRITICAL PROCESS: Proceed with caution to ensure a quality installation. These points will be audited on a completed vehicle installation

TOOLS & EQUIPMENT: This calls out the specific tools and equipment required for this process

REVISION MARK: This mark highlights a change in installation with respect to previous issue.

SPECIAL NOTE:
After TMS and Safety mandated preparatory steps have been taken, the installation sequence is the suggested method for completing the accessory installation. In some instances the suggested sequence is written for one associate to install and in others the sequence is given as part of a team accessory installation. Unless otherwise stated in the document, the associates may perform the installation steps in any order to make the installation as efficient as possible while maintaining consistent quality.
Care must be taken when installing this accessory to ensure damage does not occur to the vehicle. The installation of this accessory should follow approved guidelines to ensure quality installation. These guidelines can be found in the Accessory Installation Practices document.

This document covers such items as:
- Vehicle Protection (use of covers and blankets, cleaning chemicals, etc)
- Safety (eye protection)
- Vehicle Disassembly / Reassembly (panel removal, part storage, etc)

**Preparation**

**Stop**
Remove negative battery cable

**Installation**

1. Remove battery bracket and slide the battery towards the engine.
2. Attach the ring terminal with 2 black wires to the 10mm factory ground bolt at driver’s side vehicle panel, next to battery (picture 1)

3. Route fog light’s wire harness from battery to large vehicle grommet. Secure with wire ties (picture 2)

4. Locate the large vehicle harness grommet on the left side. If accessible, cut the auxiliary wiring access nipple off the grommet or cut ¼” slit in grommet. Secure excess wires with wire ties to fuse block wire harness. Push the two red and gray/white wires through firewall. **Note:** Extra caution should be taken not to damage the connectors. Seal with 3M Silicone sealant (picture 3)
Vehicle Disassembly

5. Remove driver side door scuff plate. Disengage with panel tool and remove (picture 4 and 5)

6. Remove the foot rest on the driver side (picture 6)

7. Remove kick panel on the driver side (picture 7 and 8)

8. Remove the lower finish panel by removing two 10 mm bolts (picture 9)
9. Remove hood latch and connectors (pic 10)

10. Optional: Remove the metal lower knee panel by removing three 10 mm bolts (picture 11)

11. Pull top panel forward and remove dash switch plug (picture 12)

12. From inside the cabin, locate the wires that were pushed through in step 5. It will be the grommet above the emergency brake pedal (picture 13)

13. Note: Fog light kits with date code prior to 2/1/2013 require the use of a diode adapter that connects to the orange/black wire of the fog light harness. Fog light kits with date code after 2/1/2013 the diode is already incorporated into the fog light harness.

14. T-tap orange/black wire (with the diode adapter installed) from fog light harness to connector IA-1 pin 29, white wire. Connector IA-1 is located in the upper kick panel area (pictures 14 and 15)
15. T-Tap the green/black wire from fog light harness to connector IA-1, pin 35, red-black wire (picture 14 and 15)

16. Secure the supplied yellow T-Tap to the white-green wire of connector 1A, pin 5. Connector 1A is next to the fuse block (picture 16 and 16A)

17. Connect the red and gray/white wires with bullet connectors from outside harness to inside harness red and gray/white wires. Connect the 14 gage red wire from fog light harness to the supplied fuse. Connect the other end of the fuse to the yellow t-tap installed in step 16 (picture 17)

18. Secure fog light wire and relay with wire ties. Run wire to switch location on finish panel and secure any excess wire with wire ties (picture 18)
19. Pull switch wire harness through switch opening. Connect switch and then install switch into panel (picture 19 and 19A)

20. Reinstall dash panels and reconnect cables and connectors.

ENGINE COMPARTMENT

21. Remove the radiator cover shield (pic. 20)

22. Drop the left side of fog light harness down on left side of vehicle, to reach fog light compartment area (picture 21)

23. Run the wire harness to the right side on top of the radiator housing and drop right side of wire harness to reach the right fog light compartment area (picture 22). Use wire ties as needed.
24. Remove push-pin on the fender liner and two splash shield 10 mm bolts under the fender liner. Pull fender liner back to access fog light area (pictures 23 & 23A).

25. Remove fog light bezel cap and discard it. Save screws for next step (picture 24).

26. Insert one side of the fog light into the plastic sleeve through the open fender and secure other side with removed factory Phillips screws (picture 25). Repeat this step for left and right fog lamps.

**NOTE:** Use only hand tools to adjust the fog light aiming screw. DO NOT use automatic tools, as they will damage the fog light.

27. Plug in left side fog light into harness plug and secure with wire ties.

28. Plug in right fog light harness into fog light and secure with wire ties.
29. Reinstall lower splash shield and wheel liner
30. Put battery in position and reinstall battery bracket
31. Reinstall battery bracket (picture 26), reconnect negative battery cable and torque to 48 in-lbs
Check System for Operation

1. Reconnect battery terminals
2. Turn on headlamp low beams, then press fog light switch to “ON” position. Fog lights should be working. Fog lights will only work when the low beam headlamps are “ON”. Fog lights will NOT work when the high beam headlamps are “ON”

Fog Light Aiming

Traditional fog lights are usually mounted in the front bumper about 10-24 inches from the ground. There are two important issues to address when installing fog lights: the first is to minimize the amount of return glare into the drivers eyes, and the other is to minimize the glare into oncoming eyes. Both of these issues must be accomplished while putting as much light as possible on the road.

These fog weather light aiming instructions are suggestions taken from common practice and the S.A.E. standard J583. Some modifications to these instructions may be necessary to minimize glare.

Visual aim is made with the top of the beam 4 inches below the lamp center at 25 feet with the lamp facing straight forward (see picture 26)
Check
Accessory Functions Checks

☐ Fog Lights function............................
☐ All Panels snapped into place..................
☐ Fog Lights...........................................
☐ Battery Terminal....................................

Vehicle Function checks

☐ Check functions all switch functions

Look For:

......
Loose panels and switches
Visually confirm lights are straight forward
Re-torque battery terminals to 48 in-lb
Place fog light operation guide inside glove box.

VEHICLE FUNCTION CHECK
AFTER ALL PANELS, COVERS AND COMPONENTS THAT WERE REMOVED HAVE BEEN REINSTALLED, TEST THOROUGHLY ALL MECHANICAL AND ELECTRICAL COMPONENTS DISCONNECTED AND/OR REMOVED FROM THE VEHICLE DURING THE INSTALLATION OF THIS ACCESSORY
